

PURUSHOTTAMA KAVYA

Software Engineer – Full-Stack & AI

pkavya1112003@gmail.com | +91 8331956677 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full-Stack and AI Engineer with production internship experience shipping LLM-powered pipelines (LangChain, RAG, OpenAI), microservice architectures (FastAPI, Node.js, Docker), and responsive frontends (React, TypeScript). National hackathon winner (MLH Frost Hacks, Best Use of MongoDB) and GirlScript Summer of Code open-source contributor.

SKILLS AND TECHNOLOGIES

Programming Languages:	C++, Python, JavaScript, TypeScript, SQL
Backend:	Node.js, Express.js, Flask, FastAPI, REST APIs, Microservices
Frontend:	React.js, HTML/CSS, Tailwind CSS, Bootstrap
AI & LLM Technologies:	OpenAI APIs, LangChain, RAG (Retrieval-Augmented Generation), Agentic Workflows, Prompt Engineering, AI Content Generation
Databases:	PostgreSQL, MongoDB, MySQL, Redis, SQLite
DevOps & Tools:	Git/GitHub, Docker, Postman, Linux, Figma

WORK EXPERIENCE

AI Engineer Intern | Datai2i Pvt Limited Mar 2026 – Present

- Contributed across full-stack, AI, and infrastructure layers on two production platforms spanning architecture decisions, technical documentation, API design standards, and peer code reviews; deployed features across Dockerized dev and staging environments with per-module service isolation via Docker Compose

CareerGini – AI Career Readiness Platform

- Engineered 4 core platform modules (Gini Chat, Learning Hub, Capstone Projects, GiniCode) as module lead from schema design to React frontend; configured Nginx for local dev server routing.
- Designed prompt pipelines using OpenAI and LangChain to deliver personalized learning paths; integrated AI workflows into REST APIs using Node.js, FastAPI and PostgreSQL within a Dockerized microservice architecture spanning 3 backend services

DiziGini – AI Outreach Automation Platform

- Architected a FastAPI pipeline to parse unstructured brand data and route content through intent-specific generation prompts, producing structured HTML email templates, enabling efficient content delivery to over 10,000+ end-users and implemented OAuth2 authentication for secure domain-level access control.

Associate Software Engineer Intern | Tecnicos Integration Technologies Nov 2024 – Mar 2025

- Developed and maintained backend modules in C++ and Python with RESTful API integrations, applying OOP principles and modular design; participated in Agile code reviews and testing workflows.
- Optimized MySQL and MongoDB queries, reducing data retrieval latency by 10% via targeted indexing and query restructuring across production databases.
- Identified, debugged, and resolved 15+ production issues, directly improving system reliability and uptime across live services.

PROJECTS

Vulnerability Scanner

Python • Flask • Bandit • OWASP ZAP • NVD API

- Built an automated security scanning platform integrating Bandit, OWASP ZAP, and NVD API, surfacing 60+ vulnerabilities mapped to CVSS severity levels and eliminating manual CVE lookup across 3 integrated security scanners with remediation reports generated via a Flask REST API backend.

Expense Tracker

Python • Flask • MongoDB • Chart.js • REST APIs

- Implemented a full-stack expense tracker with Flask and MongoDB featuring JWT authentication, 10+ RESTful API endpoints, and Chart.js dashboards visualizing spending trends across categories; engineered async budget threshold alerts to notify users when monthly limits are exceeded, supporting transaction management across unlimited concurrent budget categories.

GeoInsights – MLH Frost Hacks National Winner

React • React Native • MongoDB • Geolocation APIs

- Led a team of 4 to ship a cross-platform location-based incident reporting app at MLH Frost Hacks; owned the full frontend, integrating geolocation REST APIs and responsive UI — won **Best Use of MongoDB** competing against teams from across India.

EDUCATION

Vignan's Institute of Information Technology
B.Tech in Computer Science Engineering CGPA: 8.33

Visakhapatnam, Andhra Pradesh
Dec 2021 – May 2025

ACHIEVEMENTS & CERTIFICATIONS

- National Hackathon Winner** – MLH Frost Hacks, Best Use of MongoDB; led team end-to-end from ideation to working product.
- GSSoC '24** open-source contributor – merged PRs to web technology projects.
- Solved **200+** problems on LeetCode & CodeChef.
- National Athlete & **NCC-B** Certificate holder.
- Certifications:** Python Programming Fundamentals • Cybersecurity Foundations • NoSQL • Postman API Fundamentals
